

Virtual Reality Application

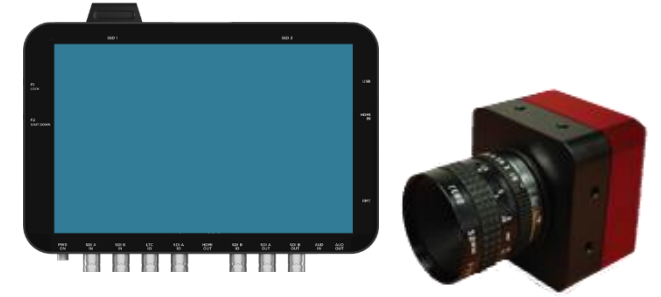

Battery powered, HD camera
connected to Portable HD
recorder

Recorded footage for
High resolution viewing

A virtual reality cycling company needs a method to record high resolution imagery for their customer's to view during their workouts.

Solution:

An professional quality, battery powered, HD camera with SDI output is mounted on a cyclist's bicycle and connected to a small, portable HD recorder.

The camera captures video of the cyclist's ride and the HD recorder stores it. The company is able to edit the footage for high resolution viewing.

The video can be viewed on a monitor or with a virtual reality helmet.
